

The mobile flying platform allows for good visibility and the 5 anchors can enable the dock to be oriented into the wind and the center of the flying box.

To take off with wind direction.

To allow for comfortable flying.

There are chairs for the pilots and spectators to sit and enjoy the flying with a covered roof for shade with a swimming ladder and railings strategically placed around the parameter.

There a prep table for changing batteries and checking the aircraft over carefully before each flight comfortably without crouching on the ground.

Lots of room for the spotter to monitor any boat or wildlife traffic in the flying area.
